

Appendix H. Charmonman's Method and SCITplus

H.1 Charmonman's Method. Charmonman's Method is a numerical method using a computer to compute solution of Laplace's equation with two free boundaries. For example, a free boundary is between air and fresh water, and another free boundary is between fresh water and salt water. The method was proposed by Prof. Srisakdi Charmonman in the year 1964. The name of the method was given by Prof. Dr. M. R. Carstens and Prof. Dr. G. D. May of Georgia Institute of Technology in the US. Searching "Charmonman's Method" in Google Scholar yielded:

H.2 SCITplus. SCITplus is the Learning and Content Management System (LCMS) developed at Srisakdi Charmonman IT Center (SCIT) by modifying Moodle. More information may be obtained by searching Google for "SCITplus":
