Abstract - In order to compete in the rapidly changing market, organisations need to perform its operation strategically to be sustained in the business. This research aims to examine the impacts of personal knowledge management and leadership styles towards organisational performances of the hospitals in Thailand. The survey questionnaires will be applied as research tools and distributed to the directors of organisations. Furthermore, various statistical analysis will be applied to investigate the association between personal knowledge management, leadership styles, and organisational performances. Finally, the expected results are discussed.

Keywords - Personal Knowledge Management, Learning Style, Organisational Performance
